

## Tectonic journey of Indian Plate through time

**Nivedita Chakraborty.**

Department of Geology

Kabi Jagadram Roy Government General Degree College

## CONCEPT OF PLATE

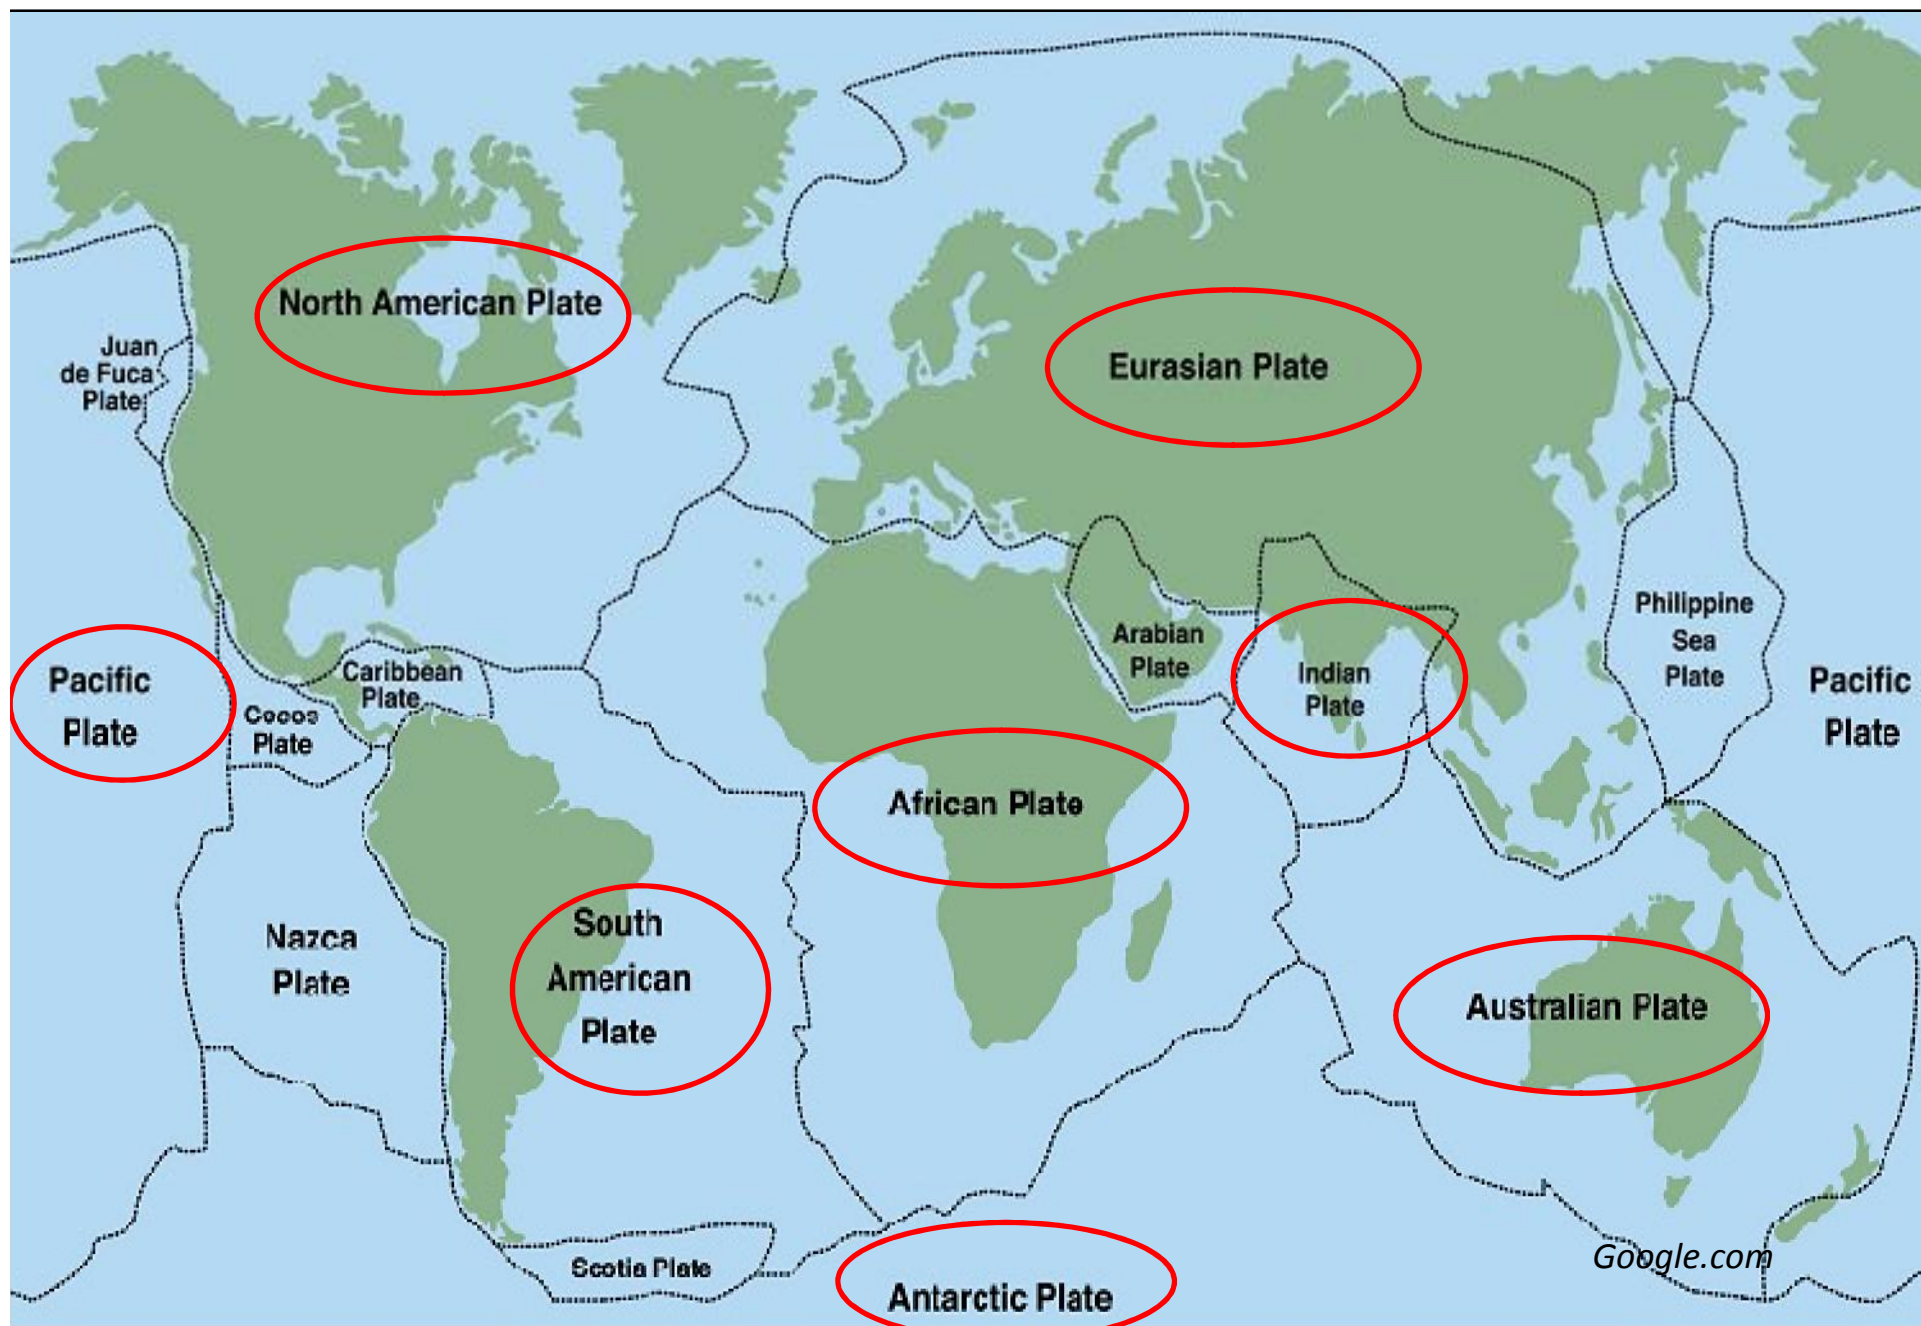

Images for plate

Homophonic confusion!

## CONCEPT OF CONTINENTAL DRIFT

- **Alfred Wegener**, a German geophysicist and meteorologist, proposed the hypothesis of “**Continental Drift**” to the German Geological Society on 6th January, 1912.
- **Continental Drift** –a hypothesis which proposed that the continents had all been joined together to form one “supercontinent”, the supercontinent broke into pieces and drifted apart forming the modern continents.

## PLATE TECTONICS

Alfred Wegener

*Lets see a few snapshots of continental drift taken from Geological Time Machine!!*

# INTERNATIONAL CHRONOSTRATIGRAPHIC CHART

International Commission on Stratigraphy

v 2018/08

Eonothem / Eon	Erathem / Era	System / Period	Series / Epoch	Stage / Age	GSSP	numerical age (Ma)
Phanerozoic	Cenozoic	Quaternary	Holocene	Meghalayan	UL	present
				Northgrippian	M	0.0002
		Pleistocene	Upper	Greenlandian	L/E	0.0117
						0.126
		Pliocene	Middle			0.781
				Calabrian		1.80
				Gelasian		2.58
	Neogene	Miocene		Piacenzian		3.600
				Zanclean		5.333
				Messinian		7.246
				Tortonian		11.63
				Serravallian		13.82
				Langhian		15.97
				Burdigalian		20.44
				Aquitanian		23.03
	Paleogene	Oligocene		Chattian		27.82
				Rupelian		33.9
		Eocene		Priabonian		37.8
				Bartonian		41.2
				Lutetian		47.8
				Ypresian		56.0
				Thanetian		59.2
	Paleocene			Selandian		61.6
				Danian		66.0
	Mesozoic	Cretaceous	Upper	Maastrichtian		72.1 ± 0.2
				Campanian		83.6 ± 0.2
				Santonian		86.3 ± 0.5
				Coniacian		89.8 ± 0.3
				Turonian		93.9
				Cenomanian		100.5
				Albian		~ 113.0
				Aptian		~ 125.0
				Barremian		~ 129.4
				Hauterivian		~ 132.9
				Valanginian		~ 139.8
				Berriasian		~ 145.0

Eonothem / Eon	Erathem / Era	System / Period	Series / Epoch	Stage / Age	GSSP	numerical age (Ma)
Phanerozoic	Mesozoic	Jurassic	Upper	Tithonian		152.1 ± 0.9
				Kimmeridgian		157.3 ± 1.0
			Middle	Oxfordian		163.5 ± 1.0
				Callovian		166.1 ± 1.2
				Bathonian		168.3 ± 1.3
				Bajocian		170.3 ± 1.4
		Triassic	Lower	Aalenian		174.1 ± 1.0
				Toarcian		182.7 ± 0.7
			Upper	Pliensbachian		190.8 ± 1.0
				Sinemurian		199.3 ± 0.3
	Paleozoic	Permian	Hettangian	Hettangian		201.3 ± 0.2
				Rhaetian		~ 208.5
			Upper	Norian		~ 227
				Carnian		~ 237
			Middle	Ladinian		~ 242

Units of all ranks are in the process of being defined by Global Boundary Stratotype Section and Points (GSSP) for their lower boundaries, including those of the Archean and Proterozoic, long defined by Global Standard Stratigraphic Ages (GSSA). Charts and detailed information on ratified GSSPs are available at the website <http://www.stratigraphy.org>. The URL to this chart is found below.

Numerical ages are subject to revision and do not define units in the Phanerozoic and the Ediacaran; only GSSPs do. For boundaries in the Phanerozoic without ratified GSSPs or without constrained numerical ages, an approximate numerical age (–) is provided.

Ratified Subseries/Subepochs are abbreviated as U/L (Upper/Late), M (Middle) and L/E (Lower/Early). Numerical ages for all systems except Quaternary, upper Paleogene, Cretaceous, Triassic, Permian and Precambrian are taken from 'A Geologic Time Scale 2012' by Gradstein et al. (2012); those for the Quaternary, upper Paleogene, Cretaceous, Triassic, Permian and Precambrian were provided by the relevant ICS subcommissions.

Colouring follows the Commission for the Geological Map of the World (<http://www.cgmw.org>)

Chart drafted by K.M. Cohen, D.A.T. Harper, P.L. Gibbard, J.-X. Fan (c) International Commission on Stratigraphy, August 2018

About 300 million years ago, Earth didn't have seven continents, but instead one massive supercontinent called **PANGAEA**, which was surrounded by a single ocean called **PANTHALASSA**.

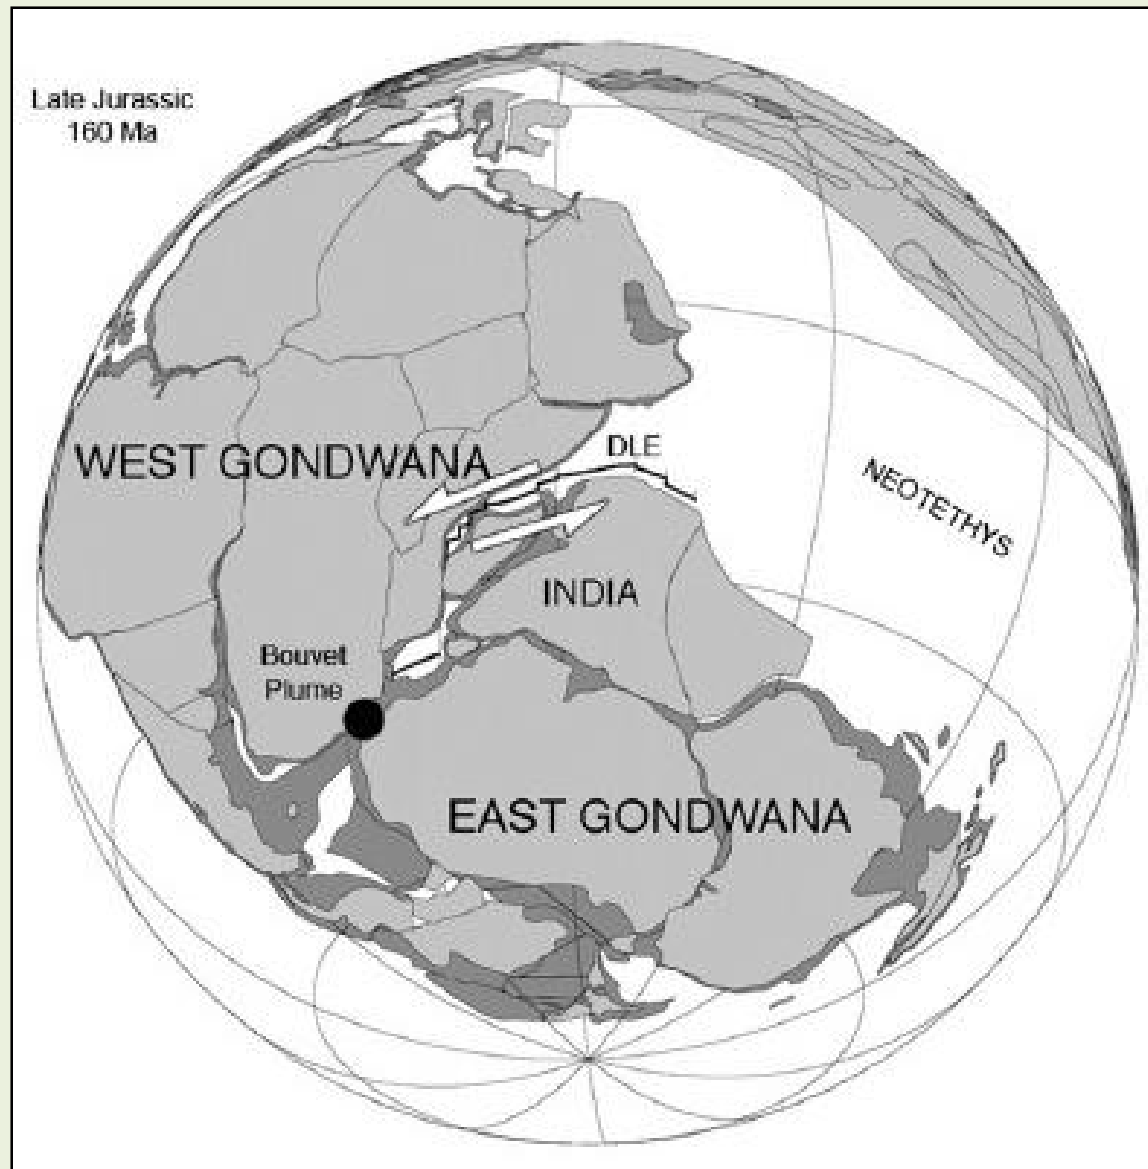

By Late Triassic time (~235 Ma) Pangaea began to break apart into **LAURASIA** and **GONDWANA**

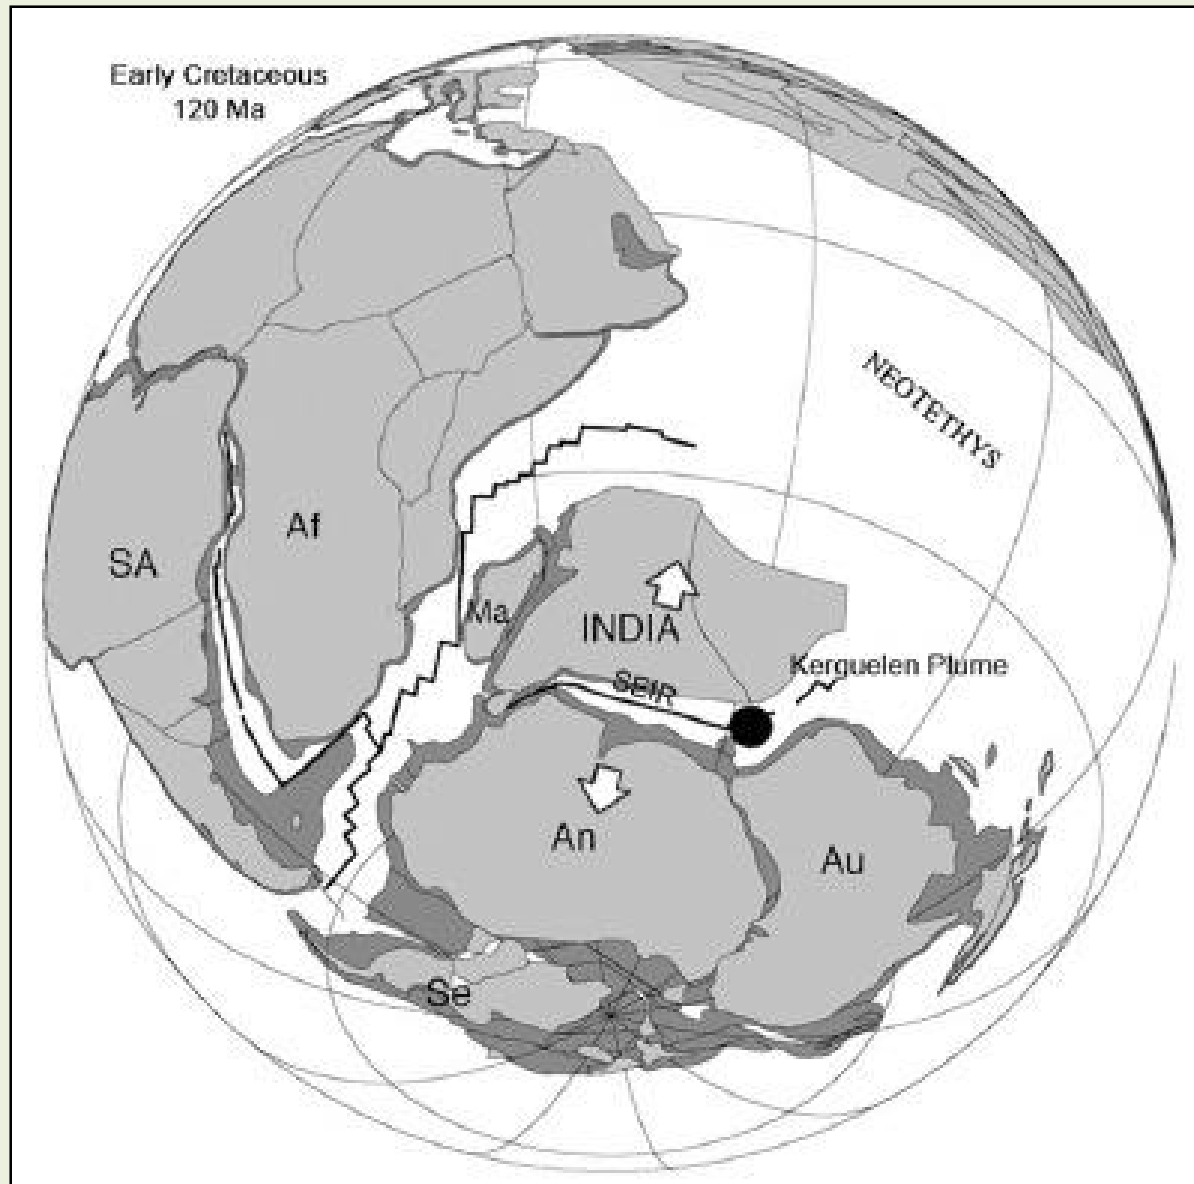

Separation of **EAST GONDWANA** from **WEST GONDWANA** during Late Jurassic time (~160Ma)

Chatterjee et al. (2013)

Separation of **INDIA** from **ANTARCTICA-AUSTRALIA** during the Early Cretaceous (120Ma)

Chatterjee et al. (2013)

Separation of **INDIA** from **MADAGASCAR** during the Late Cretaceous (~90Ma)

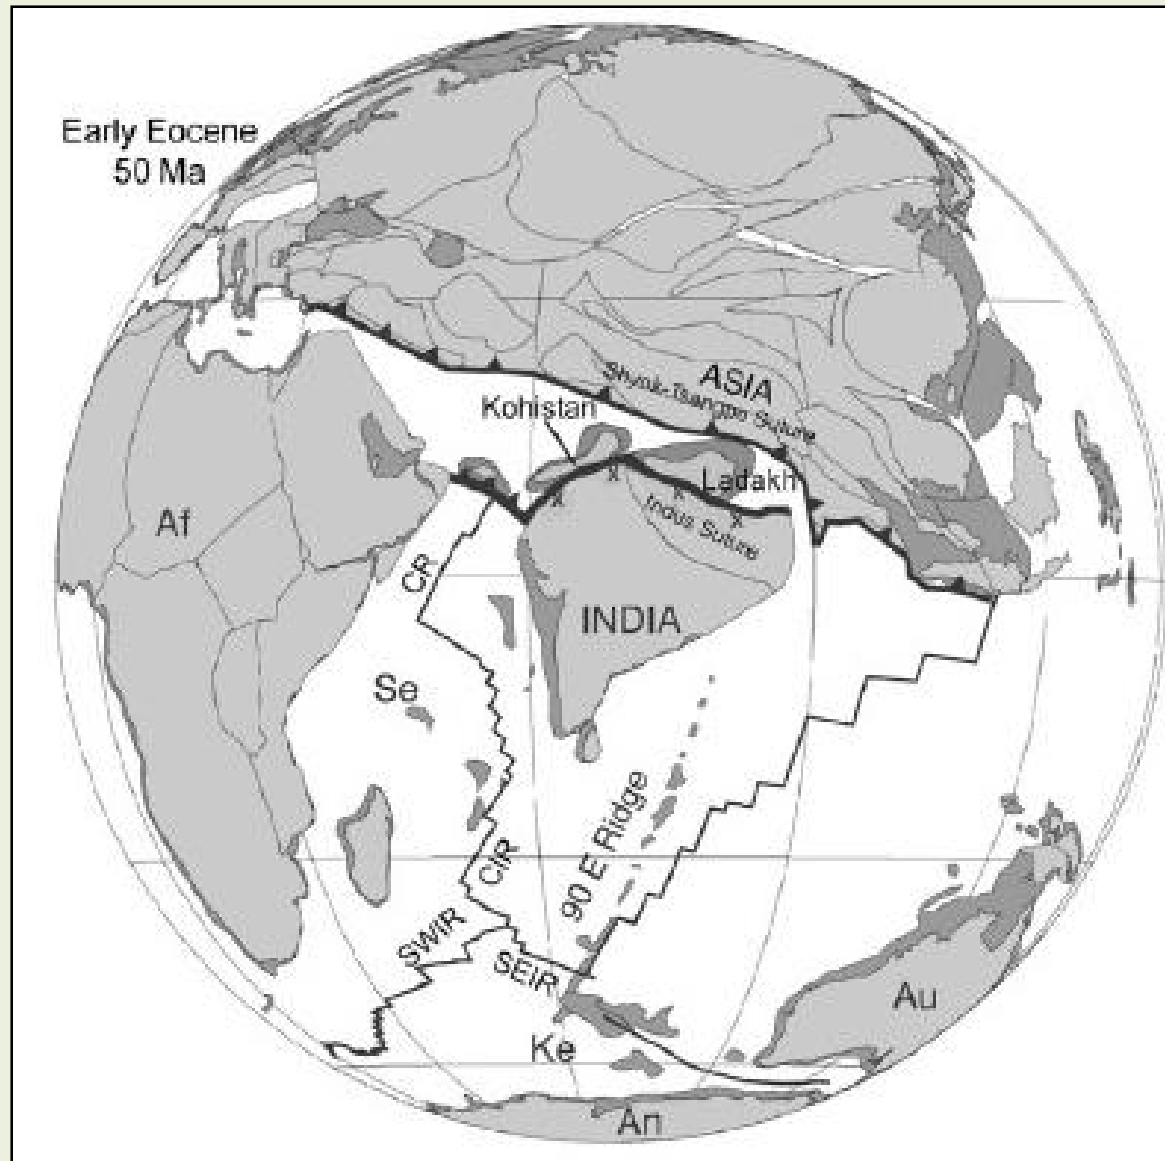

Collision of the **Indian plate** with the **Kohistan-Ladakh island arc** during the Late Cretaceous time along the Indus Trench (~80 Ma)

**INDIA-ASIA COLLISION** with the closure of the Neotethys during Early Eocene (~50 Ma)

## TECTONIC JOURNEY OF INDIAN PLATE

One of the most complex and remarkable journeys of all the continents .

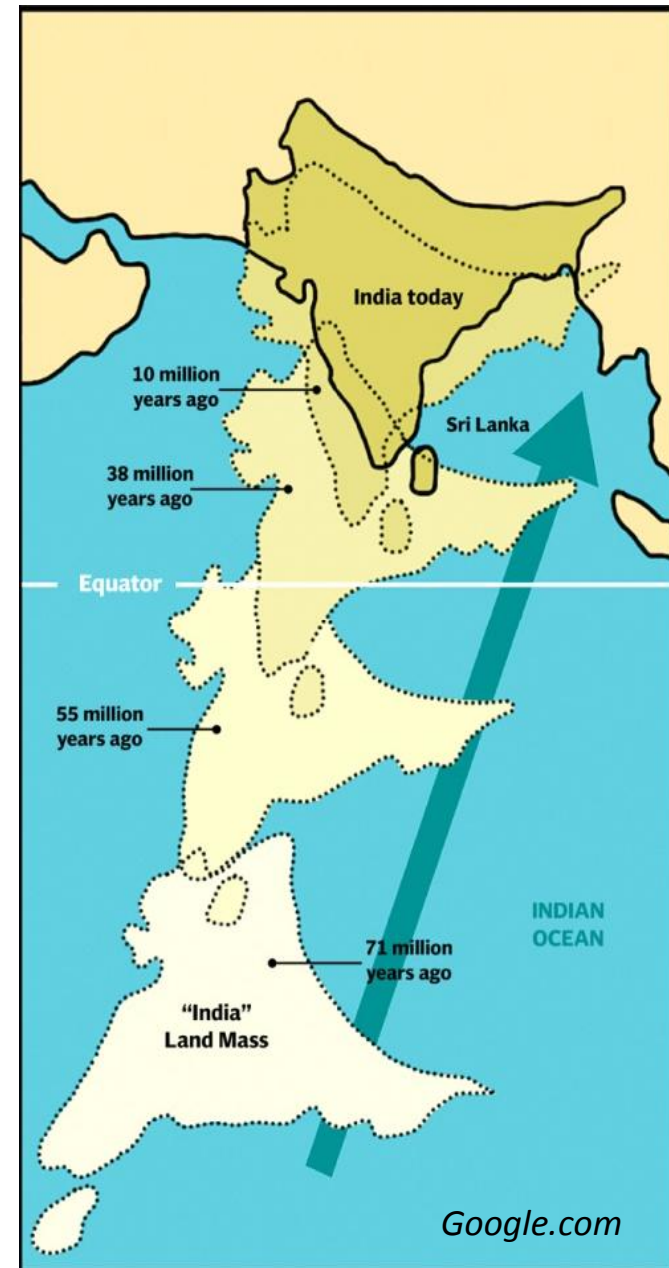

**~ 9000 KM IN 160 MILLION YEARS!!**

### *Indian Plate velocity:*

- Starting northward at a rate of **3–5 cm/year** (**Mesozoic**)
- Sudden acceleration of **20 cm/year** (from Late **Cretaceous** (~67 Ma) at the KT boundary):  
**MAXIMUM!**
- Slowed down considerably at **5 cm/year** (Early **Eocene** ,~50 Ma) during its convergence with Asia and the closure of the Neotethys .

<https://youtu.be/uLahVJNnoZ4>

<https://youtu.be/UvIDxu7twpc>

THE INDIAN PLATE IS STILL ACTIVE TODAY AND DRIFTS AT A  
VELOCITY OF ABOUT 5 CM/ YEAR!

Thank you!
